Austin, TX • garickmendez7@gmail.com • 512.947.9149 • in/garick-mendez • garickm.com • github.com/garick-git

Software Developer with 4+ years of experience spanning React/Next.js front ends, Flask/SQL backend development, and AWS/Docker cloud infrastructure. Comfortable moving across the stack, from building production UI to implementing API-driven data operations and supporting cloud deployments.

Skills

Programming Languages: TypeScript, JavaScript, Python, SQL, JSX, HTML5, CSS3.

Technologies: Flask, Django, React, Next.js, REST API, GraphQL, JSON, Git, NPM, Vitest, Figma, WebSockets.

Web Architecture: AWS (Amplify, S3, Lambda), Docker, Shopify Hydrogen.

Experience

Jeff Martin Auctioneers

May 2024 - August 2026 • Austin, TX

Front-End Engineer

- Led the design-to-code process for 83 responsive pages, translating Figma designs into accessible, production-ready UI and validating it through mock auction testing with 20-40 internal staff, incorporating WCAG-based accessibility testing (WAVE).
- Collaborated with backend engineers on API design decisions for 8 services behind a unified gateway and built 176 modular React components using hooks, context, and state management to integrate that data into the UI.
- Configured a Python-based OTP email verification flow for customer and staff account recovery across 2 websites, resolving a critical login blocker for users locked out after forgetting their password.
- Engineered a WebSocket-based real-time bidding system and object-level locking across auctions, items, locations, and users to prevent simultaneous edits and data conflicts, self-taught via AI-assisted learning (Claude) to apply WebSocket and UI/UX best practices.
- Wrote and maintained 50+ unit tests with Vitest covering core functions, validators, and formatters across two Next.js applications, maintaining a stable, production-bug-free release cycle.

Cooledtured

November 2023 - March 2024 • Austin, TX

Front-End Intern

- Took direction from senior engineers and product managers to refactor a legacy frontend into a modern React, TypeScript, and GraphQL codebase, ramping up quickly on an unfamiliar stack to deliver production-ready code.
- Worked as part of an 8-developer team using Git and NPM to ship a full website redesign for a company of 125+ employees serving 150,000 monthly users, adapting to shifting priorities across the sprint.
- Resolved 9 development tickets and reviewed peer code across 15 pull requests, staying flexible across task types and contributing to a reliable headless commerce platform on Shopify Hydrogen used by executives.

Renzoe Box

June 2022 - January 2023 • Austin, TX

Full-Stack Intern

- Supported cloud infrastructure using AWS services (Amplify, S3, Lambda) for Dockerized applications and backend development by implementing CRUD operations in a Flask/SQL environment under senior engineers.
- Slashed post-release defects by 50% by applying full-stack engineering best practices, including clean code standards, documentation, and code reviews.
- Delivered 8 sprint presentations directly to product owners and met every sprint deadline, maintaining clear communication between engineering and product teams.

Education

Bachelor of Science in Computer Science
St. Edward's University • Minor in Business

May 2024 • Austin, TX
